The pictures in this booklet show in seven chapters excavated osteonecrotic jawbone marrow (FDOJ) in patients suffering from

To give prove to the lowgrade inflammation the corresponding pathohistologic findings are shown below the FDOJ images.

The possible science based interface to chronic RANTES/CCL5 overexpression from FDOJ by literature citations on these chronic immune diseases is shown at the end of each of the seven chapters. Some images include the RANTES/CCL5 expression in pg/mL of the displayed FDOJ.
